

V28 HCC Model Impact

- Removal of 2,294 diagnosis codes that no longer map to a payment HCC
- Addition of 268 codes that did not map to a payment HCC
- Changes to HCC coefficient values due to remapping to different HCC category

Patient Example: Increase in HCC Value

- Dual Eligible: Non-Medicaid
- Medicare Status Code: Disabled without ESRD
- HCC111 Category Value = 0.246
- Per Patient Benchmark Value = \$2,558.89

Under V28 HCC Model HCC111 category will be remapped to HCC280 category with an increased coefficient value of \$2,558.89. While this example depicts an increase other remappings will result in a decrease in value.

Over 2,000 categories and their related values are to be eliminated.

Examples: Removal of HCC Value
